

CT 30-ZP4

Short Centre-loaded Mobile Antenna for the 30 MHz Band

- Short antenna with attractive appearance ideal for mounting on the car roof.
- High efficiency in spite of low height due to high-Q centre-loading coil and matching unit built into mount.

DESCRIPTION

- Stainless steel ZP4-mount with ball-joint and wing screw whipfastening system.
- Simple mounting exclusively with access from the outside.

 Models with roof thickness from 2 mm to 7.5 mm mounting from the inside.
- Delivered with 4 m cable permanently attached to the mount and terminated with FME-connector.

INSTALLATION

This antenna is supplied with type ZP4-mount. The whip is fastened to the mount by means of our standard ball-joint and wing screw system. The adjustable ball-joint ensures that the whip can always be mounted in a vertical position independent of the angle of the installation spot.

The ZP4-mount is particularly well suited for mounting on car-roofs because of its ability to be installed exclusively with access from the outside. The ZP4-Mount for roof thickness from 2 mm to 7.5 mm must be mounted from the inside. However, the antenna can be installed anywhere on the car, as the ZP4-mount is equally well suited for mounting on e.g. trunk or wing.

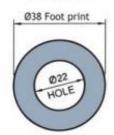

1. INSTALLATION DIMENSIONS

ZP4-MOUNT

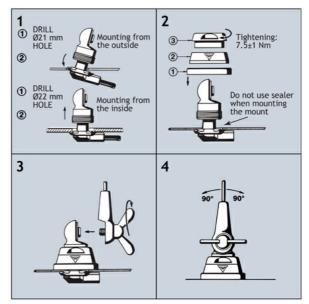

Build- in depth: 10.5 mm Mounting from the outside

ZP4-MOUNT

Build- in depth: 10.5 mm Mounting from the inside

2. INSTALLATION STEPS

Do not use sealer on rubber gasket or other places.

3. TUNING

The antenna should always be post-adjusted using an SWR-meter, especially if

mounted near metal parts parallel to the whip.

Loosen the union nut at the top of the coil and pull out the whip approx. 5 mm at a time until best possible SWR is obtained.

Fasten the union nut thoroughly.

PLEASE NOTE

To make this antenna operate as efficiently as possible, a matching unit has been built into the antenna mount. Consequently, neither mount nor whip can be used together with other mounts/whips.
